

instructions for use

1. Manufacturer: HB-DIGITAL GmbH
Wahlerstr. 16
40472 Düsseldorf
Germany
2. Product: satellite systems

This equipment is used to receive satellite signals and connect to the network. The satellite antenna receives the signal from satellites and transmits it to a receiver or other devices. Multiswitches distribute the received signal to several devices, so that a single source can be used for several TVs or receivers. Signal amplifiers ensure stable signal transmission over long distances and improve reception quality. Such systems can be installed in both private and commercial establishments to provide access to a wide range of satellite channels.

Since this is electrical equipment, we strongly recommend that installation be carried out only by qualified personnel to ensure safety and avoid possible damage.
