

instructions for use

1. Manufacturer: HB-DIGITAL GmbH
Wahlerstr. 16
40472 Düsseldorf
Germany
2. Product: hb-digital Solarkabel

Cable is used to create a connection between solar panels and devices that capture and process the sun's energy, such as charge controllers or batteries. It is necessary so that the energy generated by the solar panels can be transferred to other parts of the system and used or stored there. The cable is designed to withstand different environmental conditions, making it ideal for outdoor use, where solar panels are usually installed. The connection is made by connecting the cable to the corresponding devices using special connectors suitable for the specific system. It is an important component to enable the function of a solar energy system, be it at home or in other locations.

Since this is electrical equipment, we strongly recommend that installation be carried out only by qualified personnel to ensure safety and avoid possible damage.
